

CYBER JAGROOKTA DIWAS – SEPTEMBER 2025

MOBILE SECURITY THREATS

Mobile devices are a prime target for cybercriminals since they carry sensitive personal and professional data. Awareness and caution are the first steps to keeping your information safe. Stay informed, act smart, and secure your device against hidden threats.

Phishing Apps & Links

Beware of fake apps and malicious links that steal credentials.

Malware & Spyware

Malicious downloads can monitor activity and steal data.

Location Tracking

Apps may misuse permissions to track your movements.

Weak Passwords

Easy-to-guess PINs or reused passwords make phones vulnerable.

Public Wi-Fi Risks

Hackers exploit unsecured networks to intercept data.

Unpatched Devices

Failing to update OS and apps leaves security gaps.

BYOD Risks

Mixing personal and work data on one device increases exposure.

“Your phone holds your world, don’t let threats unlock it!”
